specifies field methods for measuring
the impact sound insulation properties
of building floors by using a standard
tapping machine The method is
applicable to bare floors and also to
floors with coverings The results
obtained can be used to compare the
impact sound insulation properties of
floors and to compare
the"INTERNATIONAL ISO

Measurement of sound insulation

June 26th, 2018 - Description This part of ISO 140 specifies two series of methods element methods and global methods for measurement of the airborne sound insulation of facade elements and whole facades respectively The element

methods aim to estimate the sound reduction index of a facade element for example a window The most accurate element method uses a loudspeaker as an artificial sound source'
