'interaural time difference
June 5th, 2020 - the interaural time
difference or itd when concerning
humans or animals is the difference in
arrival time of a sound between two
ears it is important in the
localization of sounds as it provides
a cue to the direction or angle of the

sound source from the head if a signal arrives at the head from one side the signal has further to travel to reach the far ear than the near ear'
